

Released MSD benchmark package

6 source archives, 1160 runs
14 derived evaluation groups

Five analysed evaluation groups

one causal group per system family
968 released source records

Evaluable records

ATE, C and S all available: $n = 861$

two analyses

Excluded: 107 records

98 DM-VIO, no released
scaled trajectory artifact
9 Snake-SLAM, no released
trajectory-error value

RQ1 Trajectory error at high coverage

$C \geq 0.99$ and $S \geq 0.99$: $n = 612$
excluded 249 records below threshold
outcome: ATE distribution and the
 $ATE \geq 1$ m and $ATE \geq 10$ m proportions

Sensitivity and uncertainty (RQ1)

coverage threshold | equal-sequence weighting
released run-selection rule
leave-one-system-out
sequence-cluster bootstrap, 30,000 replicates

RQ2 Run-to-run variation

ORB-SLAM3 and OKVIS2, three runs each
128 system-sequence triplets
excluded 5 and 1 triplet, not all three
runs at high coverage
eligible: 59 and 63 of 64

Secondary condition (RQ2)

exact coverage $C = S = 1.0$ in all three runs
58 ORB-SLAM3 and 2 OKVIS2 triplets
